BACKGROUND

ABOUT

I am a Frontend/SW developer who loves to see the big picture but I can also work in great details. I am passionate about technologies, entrepreneurship and personal development. Over the years, I have participated in many hackathons such as Junction, AngelHack, UltraHack, lot Hackathon, Robot against Humanity Hackathon. I also belonged to a winning team in Junction 2017 and got a ticket to attend Slush 2017. I am constantly and actively improving my skills in software development through learning online courses, attending hackathons, participating tech meetups like HelsinkiJS/ReactJS and I am helping other people to get into software development in coding clubs.

WORK EXPERIENCE

• Software Developer, Devecto Oy

Jan, 2018 - Present

Fullstack web development on inhouse and customer projects using ReactJS, NodeJS, MySQL, MongoDB, deploying to Azure cloud, mobile app development with React-Native

Frontend Developer, Meetingpackage

Aug, 2017 - Nov, 2017 ⌚ 3 months

- Developing a feature for web application that receives the enquiry from users, sends enquiry data to the backend using Drupal PHP and stores in MySQL database, admin can manage all enquiries through admin dashboard. Users need to fill in multiple step form, the transition between steps was smooth and UI was decent, at certain steps user data is sent and stored in the database without interrupting user flow
- Writing user story and designing new UI for the venue page to clear out user confusion of different packages. After that developing a mockup page with VueJS to get some feedbacks from coworkers

Frontend Developer, Autonappi

Feb, 2017 - May, 2017 ⌚ 3 months

- Working directly with the CTO to build a web application from scratch using VueJS framework, Bootstrap UI. The application is for fleet managers, cars owners to manage vehicles and payment.

- Researching and consulting the CTO on different technologies that can be used for building web application, mobile application.
- Designing and developing new UI for the mobile app. The new UI looks completely different from the previous version and received praises from CEO and managers.
- Building new website for the company using WordPress. The previous website was built using web builder which has some limitations. The new website has reduced the website monthly cost for the company and helped gaining more controls on the website.

Business Owner, VNV Siivous

Apr, 2013 - Apr, 2016 ⌚ 3 years

- Establishing the company from scratch, handling all paper works for instance tax payment, invoices, book keeping, pension and insurance.
- Financing, marketing, customer service, maintaining company's website etc

Testing Consultant, KnowIT Oy

May, 2010 - Jan, 2013 ⌚ 2 years 8 months

- For a Telecom Company client: automation testing for router's software. Working in Lab, building up, configuring, troubleshooting routers, switches, networks, traffic generators and other testing devices. Writing test script using TCL scripting language. Installing, testing software, finding and reporting bugs
- For another client: automation tests for web application testing. Using Python, Robotframework, Selenium for automation tests.

Testing Consultant, Endero Oy

Apr, 2008 - Mar, 2009 ⌚ 11 months

- Manual testing clinical system, patient monitors
- Installing, testing software, finding and reporting bugs
